Preparing for your L.H. Krueger and Son Project

A roofing project is a significant undertaking. To avoid damage to your possessions, please take the following precautions prior to our visit.

- 1.** Take down delicate knick-knacks, pictures, figurines, etc. Vibration typical during roof removal could cause them to fall.
- 2.** Park away from the dwelling during construction. There are typically 20,000 nails removed in a re-roof project. There will be nails on the ground, from time to time.
- 3.** Wherever possible, protect outdoor plantings. It is best to move flower pots and patio furniture well away from the home or to otherwise protect them.
- 4.** Mowing your lawn just prior to installation of your new roof will facilitate retrieval of any stray loose nails.
- 5.** If your home has spaced roof boards for decking, garage sifting and attic sifting may be an issue. You may want to tarp the attic or garage as there will be granules and dust falling through the openings between the roof boards.
- 6.** Please do not park in the area vacated by the dumpster until we can secure and clean that space. There may be nails present.
